Supplementary table 1 | Equations describing the ‘Likely water’ cluster hull and cluster overlaps in the multidimensional feature-space.

These equations describe the ‘Likely water’ cluster in the multidimensional feature-space. By definition, part of this cluster contain pixels that are not water, and request additional processing steps to be properly assigned. The method section provides details about the usages of this equations within the expert system classifier.

Abstract: In the last 10 years, development in remote sensing has been rapid. The availability of satellite and aerial data has increased significantly, and the resolution of the data has improved. This has led to a growing interest in remote sensing for a wide range of applications, from agriculture to urban planning. This paper presents a review of the state-of-the-art in remote sensing, focusing on the use of UAV-based sensors and the challenges associated with data correction and metadata management.

In the last 10 years, development in robotics, computer vision, and sensor technology has provided new spectral remote sensing tools to capture unprecedented ultra-high spatial and high spectral resolution with unmanned aerial vehicles (UAVs). This development has led to a revolution in geospatial data collection in which not only few specialist data providers collect and deliver remotely sensed data, but a whole diverse community is potentially able to gather geospatial data that fit their needs. However, the diversification of sensing systems and user applications challenges the common application of good practice procedures that ensure the quality of the data. This challenge can only be met by establishing and communicating common procedures that have had demonstrated success in scientific experiments and operational demonstrations. In this review, we evaluate the state-of-the-art methods in UAV spectral remote sensing and discuss sensor technology, measurement procedures, geometric processing, and radiometric calibration based on the literature and more than a decade of experimentation. We follow the journey' of the reflected energy from the particle in the environment to its representation as a pixel in a 2D or 2.5D map, or 3D spectral point cloud. Additionally, we reflect on the current revolution in remote sensing, and identify trends, potential opportunities, and limitations.

摘要
 In the last 10 years, development in robotics, computer vision, and sensor technology has provided new spectral remote sensing tools to capture unprecedented ultra-high spatial and high spectral resolution with unmanned aerial vehicles (UAVs). This development has led to a revolution in geospatial data collection in which not only few specialist data providers collect and deliver remotely sensed data, but a whole diverse community is potentially able to gather geospatial data that fit their needs. However, the diversification of sensing systems and user applications challenges the common application of good practice procedures that ensure the quality of the data. This challenge can only be met by establishing and communicating common procedures that have had demonstrated success in scientific experiments and operational demonstrations. In this review, we evaluate the state-of-the-art methods in UAV spectral remote sensing and discuss sensor technology, measurement procedures, geometric processing, and radiometric calibration based on the literature and more than a decade of experimentation. We follow the journey' of the reflected energy from the particle in the environment to its representation as a pixel in a 2D or 2.5D map, or 3D spectral point cloud. Additionally, we reflect on the current revolution in remote sensing, and identify trends, potential opportunities, and limitations.

论文写作中你是否发现？

- ❖ 写论文时，手动插入参考文献的工作很麻烦。
- ❖ 因调整论文架构而随之带来的参考文献顺序调整让工作量剧增。
- ❖ 文后参考文献格式很复杂，撰写论文时要注意很多细节。
- ❖ 不同投稿期刊对于参考文献格式要求不同，每次换投期刊就要面临格式调整的大工程。
- ❖ 不准确的参考文献格式会被期刊编辑拒稿。

Machine-learning-inspired variational methods provide a promising route towards scalable state characterization for quantum simulators. While synthetic data, applications to real experimental data remain scarce, we benchmark and compare several such approaches by applying them to measured data from an experiment producing two-qubit entangled states.¹ We find that in the presence of experimental imperfections and noise, confining the variational

such approaches by applying them to measured data from an experiment producing two-qubit entangled states.² We find that in the presence of experimental imperfections and noise, confining the state of a quantum system to a low-dimensional manifold to physical states, i.e., to positive semidefinite density matrices,³⁻⁵ greatly reduces the dimensionality of the reconstructed states but renders the learning procedure more demanding. Including additional, possibly unjustified, constraints, such as assuming pure states, facilitates learning, but also biases the estimator.

Below this, there are sections for 'All References' (2156), 'Recently Added' (2153), 'Unfiled' (2156), and 'Trash' (2361). A 'MY GROUPS' section is expanded to show various categories like 'moral risk', 'Bats', 'Chiroptera', 'Echolocation', etc. The main content area is titled 'Sync Status' and shows 'Sync Details' for a sync performed on Wednesday, November 04, 2020. It lists 'Local Library' and 'Online Library' statistics. A 'Limits' section shows reference and group counts. A 'Sync now' button and a 'Refresh status' button with a bell icon are visible. A dropdown menu is open, showing a list of activity items such as 'WANG added 118 attachments', 'WANG modified 61 references', and 'WANG modified 3 attachments'. A purple arrow points from the 'Refresh status' button to a text box on the right.

This screenshot shows a different view of the Clarivate software. The top menu bar is the same. The left sidebar is identical to the previous screenshot. The main content area is titled 'All References' and shows a search bar and an 'Advanced search' button. Below this is a 'Sync Status' section showing '3 References'. A table lists references with columns for 'Author', 'Year', 'Title', and 'Journal/Secondary Title'. The table contains three entries: 'Abnet, C. C.; ... 2012 Genotypic variants at 2q33 and risk of ... Human Molecular Genetics', 'Bartra-More, ... 2019 [Performance assessment in microscop... Rev Peru Med Exp Salud Publica', and 'Salwiczek, L. ... 2009 The development of caching and obje... Journal of Comparative Psycholog'. A purple arrow points from the 'WANG modified 3 attachments' item in the activity feed to the top of this screenshot. Below the table, a detailed view of a reference is shown, including the title 'Genotypic variants at 2q33 and risk of esophageal squamous cell carcinoma in China: a meta-analysis of genome-wide association studies', authors 'C. C. Abnet, Z. M. Wang, X. Song, N. Hu, F. Y. Zhou, N. D. Freedman, et al.', and accession number 'WOS:000302302800018'.

你的困惑是否有了解决方案?

- ❑ 各种来源文献保存分散，无统一有效管理的位置，面对纷繁冗杂的文献，经常找不到有效的文献。
- ❑ 做课题或撰写论文时，我们需要对文献进行研读，或借鉴已有的文献进行分析，讨论。但因保存文献量较大，形式繁杂，感觉无从下手。
- ❑ 写论文的时候，参考文献格式令人头疼不已，一不留神错误百出，在编辑参考文献格式上浪费大量时间精力，结果可能会被编辑质疑文章的质量。
- ❑ 投稿时，对于期刊选择无从下手，来投，纠结又迷茫不已。

统一导入至EndNote，使用分组与检索功能进行梳理

通过标记，分组，排序等功能来有序管理，快速找到所需文献

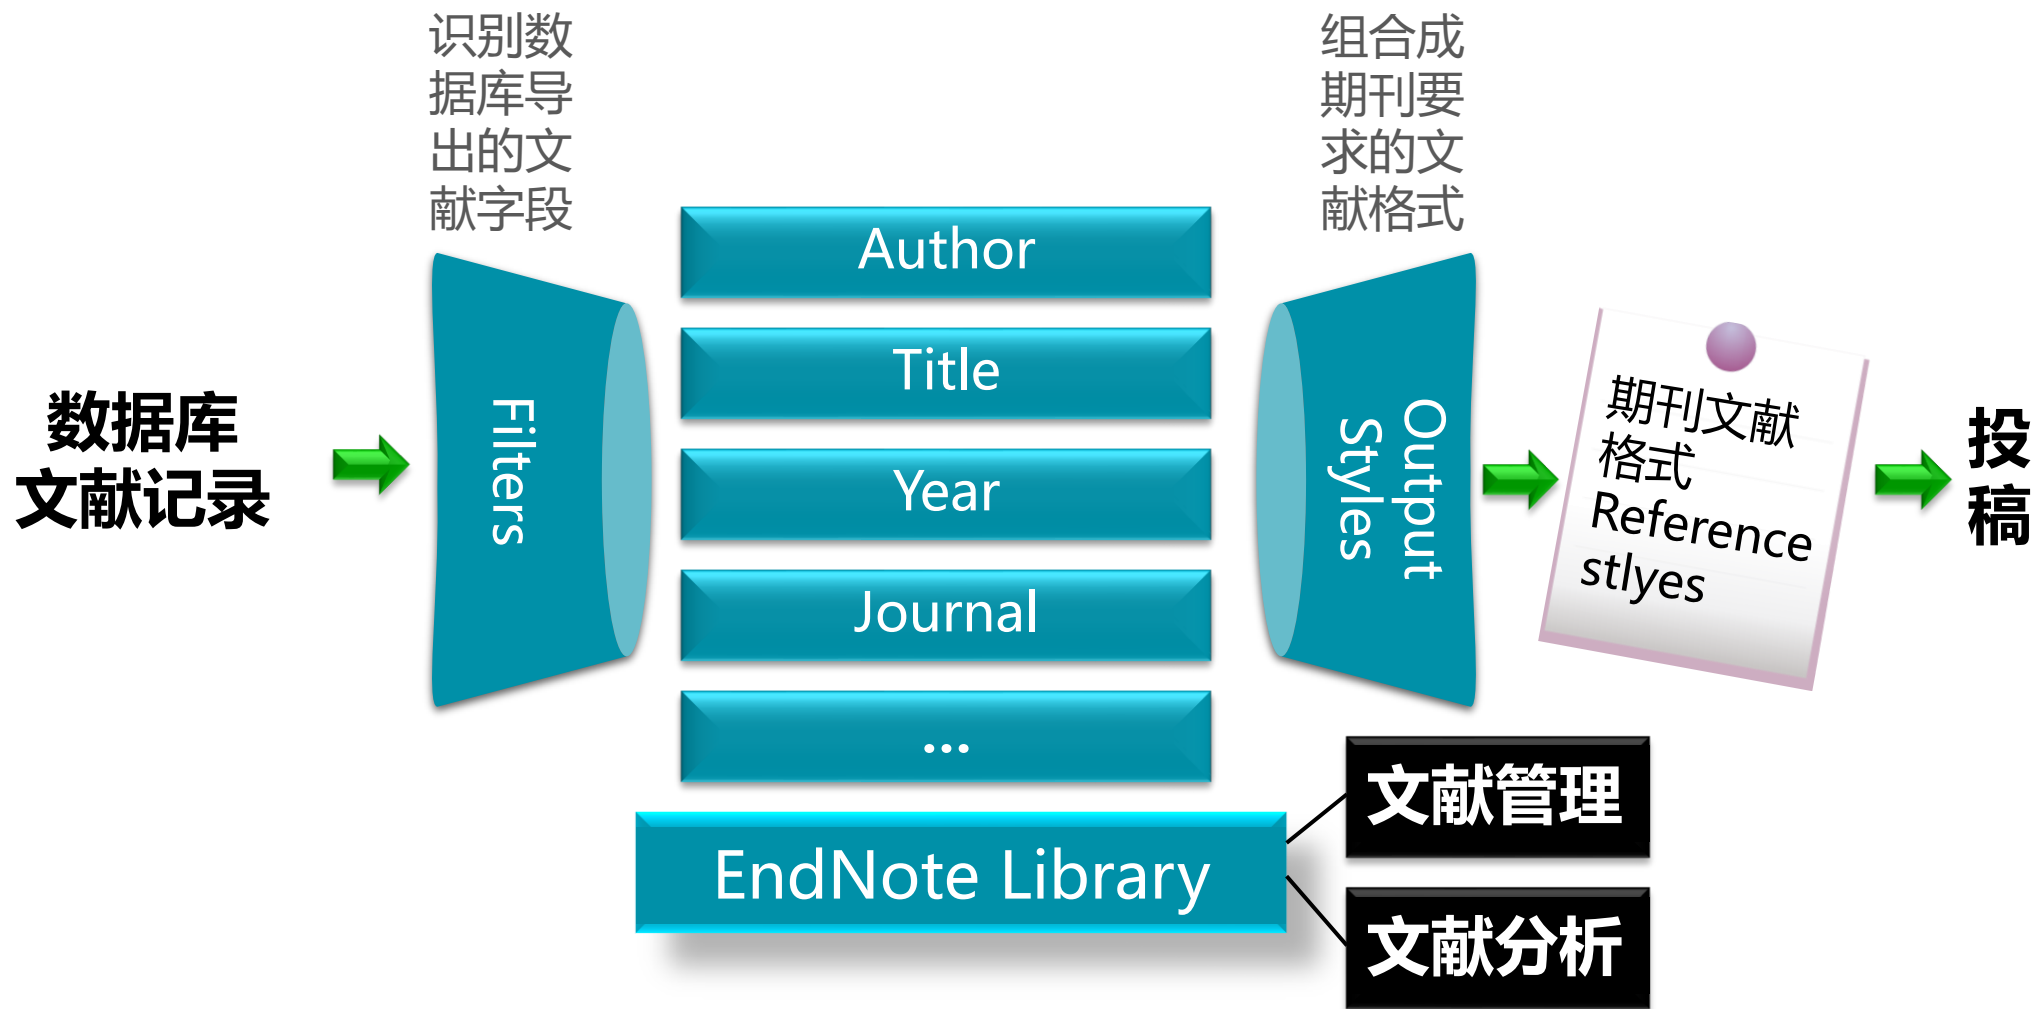

使用Cite While You Write™，自动生成7000多种期刊的参考文献格式，提高写作效率
